

Cold Weather Paving Waiver

Valued Customer,

Be advised that although we produce HMA during the winter months it is not recommended that permanent asphalt be placed during cold temperatures. In the event that material is placed when temperatures are below the NJDOT Specified minimums referenced in the table below, this waiver shall be required. Trap Rock shall not be held responsible for any issues or compaction problems related to cold temperature paving.

B. Weather Limitations. Do not place HMA if it is precipitating. Do not allow trucks to leave the plant when precipitation is imminent. The Contractor may resume operations when the precipitation has stopped and the surface is free of water.

When placing HMA, ensure that the base temperature meets the minimum temperature requirements specified in [Table 401.03.07-1](#).

Table 401.03.07-1 Minimum Base Temperature	
Lift Thickness, inches (t)	Minimum Base Temperature, °F
$t \leq 1$	50
$1 < t < 2$	41
$t \geq 2$	32
